## Week 5 sample program

1.

```
Question 1
Correct
Mark 1.00 out of 1.00
 Given an array A of positive integers, let 5 be the sum of the digits of the minimal element of A.
 Return 0 if 5 is odd, otherwise return 1.
 Example 1:
 Input:
 34 23 1 24 75 33 54 8
 Output:
 Explanation:
 The minimal element is 1, and the sum of those digits is S = 1 which is odd, so the answer is 0.
 Example 2:
 Input:
 99 77 33 66 55
 Output:
 Explanation:
 The minimal element is 33, and the sum of those digits is 5 = 3 + 3 = 6 which is even, so the answer is 1.

    1 <= Alength <= 100</li>

    1 <= A[i] <= 100</li>
```

### **Program:**

```
import java.util.Scanner; public class MinElementDigitSum
{
  public static void main(String[] args) {
    Scanner scanner = new Scanner(System.in);
    System.out.print("Enter the number of elements in the array: ");
                                                                          int
                             if (size \leq 0) {
size = scanner.nextInt();
      System.out.println("Array size must be greater than zero.");
      return;
    }
    int[] array = new int[size];
```

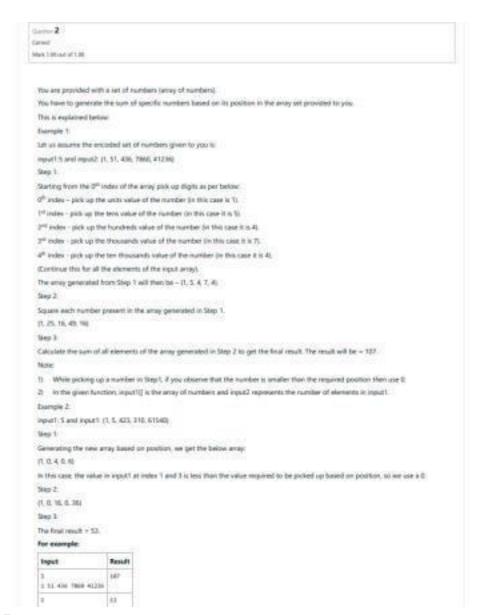

```
System.out.println("Enter the elements of the array:");
    for (int i = 0; i < size; i++) {
array[i] = scanner.nextInt();
    }
    int minElement = array[o];
    for (int i = 1; i < size; i++) {
                                     if (array[i]
< minElement) {
minElement = array[i];
      }
    }
    int sumOfDigits = 0;
                             int
number = minElement;
                            while
(number > 0) {
                     sumOfDigits
+= number % 10;
      number /= 10;
    }
    System.out.println(sumOfDigits % 2 == 0 ? 1:0);
 }
}
```

**Output:** 

```
Enter the number of elements in the array: 8
Enter the elements of the array:
34
23
1
24
75
33
54
8
```

```
Enter the number of elements in the array: 5
Enter the elements of the array:
99
77
33
66
55
```

2.

#### **Program:**

```
import java.util.Scanner; public class
DigitSumCalculator {  public static void
main(String[] args) {
    Scanner scanner = new Scanner(System.in);
    System.out.println("Enter the number of elements in the array:");
int n = scanner.nextInt();  int[] input = new int[n];
System.out.println("Enter the elements of the array:");
    for (int i = 0; i < n; i++) {
input[i] = scanner.nextInt();
    }
</pre>
```

```
int finalSum = calculateFinalSum(input);
    System.out.println("Final result = " + finalSum);
  }
  public static int calculateFinalSum(int[] input) {
int finalSum = 0;
                     for (int i = 0; i < input.length; i++)
{
        int currentNumber =
input[i];
               int digitPosition = i + 1;
                                              int digit =
getDigitAtPosition(currentNumber, digitPosition);
                                                         finalSum +=
digit * digit;
    }
    return finalSum;
  }
  public static int getDigitAtPosition(int number, int position) {
                                                                    String
numberStr = Integer.toString(number);
                                            int length =
                        if (length < position) {
numberStr.length();
      return o;
    }
    char digitChar = numberStr.charAt(length - position);
return Character.getNumericValue(digitChar);
 }
}
Output:
    Enter the number of elements in the array:
    Enter the elements of the array:
    423
    310
    61540
    Final result = 53
```

3.

Juenteen 3	
prest	
lark 1.00 out of 1.00	
The program must a	ccept N integers and an integer K as the input. The program must print every K integers in descending order as
the output.	
• 4	
Note: If N % K != 0,	then sort the final N%K integers in descending order.
Boundary Conditio	n(s):
Total of the same	
1 <= N <= 10^4	
-99999 <= Array Ele	ment Value <= 99999
Input Format:	
	s the values of N and K separated by a space.
The second line cont	ains N integers separated by space(s).
Output Format:	
The first line contain	N integers.
Example Input/Out	put 1:
Input:	
7.3	
7 3 48 541 23 68 13 41 6	
Output:	
541 48 23 68 41 13 6	
Explanation:	
The first three intege	ers are 48 541 23, after sorting in descending order the integers are <b>541 48 23</b> .
	egers are 68 13 41, after sorting in descending order the integers are 68 41 13.
The last integer is 6.	
The integers are 541	48 23 68 41 13 6 541 48 23 68 41 13 6

# **Program:**

import java.util.Arrays; import
java.util.Scanner; public class SegmentSorter
{ public static void main(String[] args) {
 Scanner scanner = new Scanner(System.in);
 System.out.println("Enter the values of N and

```
int K
K:");
         int N = scanner.nextInt();
                          scanner.nextInt();
System.out.println("Enter the " + N + " \,
elements:");
                int[] arr = new int[N]; for
(int i = 0; i < N; i++) {
arr[i] = scanner.nextInt();
    }
    for (int i = 0; i < N; i += K) {
int end = Math.min(i + K, N);
Arrays.sort(arr, i, end); reverse(arr, i,
end - 1);
    }
    for (int num : arr) {
      System.out.print(num + " ");
   }
  }
  public static void reverse(int[] arr, int start, int end) {
                                                           while
(start < end) {
                    int temp = arr[start];
                                                arr[start]
= arr[end];
            arr[end] = temp;
      start++;
end--;
    }
 }
}
```

## **Output:**

```
Enter the values of N and K:
7 3
Enter the 7 elements:
48
541
23
68
13
41
6
541 48 23 68 41 13 6
```
